# Lenguajes de Programación

Capítulo II: Análisis léxico y sintáctico - Expresiones Regulares (Regex)

---

Eduardo Godoy  
eduardo.gl@gmail.cl

2019-II

# Index

Expresiones Regulares

Lenguaje Regex

# Definición

- ▶ Las expresiones regulares proporcionan una manera eficiente para la búsqueda de patrones en texto o para la validación de datos de texto proporcionados por el usuario.
- ▶ En informática, las expresiones regulares proporcionan una manera muy flexible de buscar o reconocer cadenas de texto.
- ▶ una expresión regular es una forma de representar los lenguajes regulares (finitos o infinitos) y se construye utilizando caracteres del alfabeto sobre el cual se define el lenguaje.

# Delimitadores

## anchors

`^` Start of string, or start of line in multi-line pattern

`\A` Start of string

`$` End of string, or end of line in multi-line pattern

`\Z` End of string

`\b` Word boundary

`\B` Not word boundary

`\<` Start of word

`\>` End of word

# Aserciones

## Assertions

|            |                          |
|------------|--------------------------|
| ?=         | Lookahead assertion      |
| ?!         | Negative lookahead       |
| ?<=        | Lookbehind assertion     |
| ?!= or ?<! | Negative lookbehind      |
| ?>         | Once-only Subexpression  |
| ?()        | Condition [if then]      |
| ?()        | Condition [if then else] |
| ?#         | Comment                  |

# Grupos y Rangos

## Groups and Ranges

`.` Any character except new line (`\n`)

`(a|b)` a or b

`(...)` Group

`(?:...)` Passive (non-capturing) group

`[abc]` Range (a or b or c)

`[^abc]` Not (a or b or c)

`[a-q]` Lower case letter from a to q

`[A-Q]` Upper case letter from A to Q

`[0-7]` Digit from 0 to 7

`\x` Group/subpattern number "x"

# Agrupaciones

## Character Classes

|                 |                   |
|-----------------|-------------------|
| <code>\c</code> | Control character |
|-----------------|-------------------|

|                 |             |
|-----------------|-------------|
| <code>\s</code> | White space |
|-----------------|-------------|

|                 |                 |
|-----------------|-----------------|
| <code>\S</code> | Not white space |
|-----------------|-----------------|

|                 |       |
|-----------------|-------|
| <code>\d</code> | Digit |
|-----------------|-------|

|                 |           |
|-----------------|-----------|
| <code>\D</code> | Not digit |
|-----------------|-----------|

|                 |      |
|-----------------|------|
| <code>\w</code> | Word |
|-----------------|------|

|                 |          |
|-----------------|----------|
| <code>\W</code> | Not word |
|-----------------|----------|

|                 |                   |
|-----------------|-------------------|
| <code>\x</code> | Hexadecimal digit |
|-----------------|-------------------|

|                 |             |
|-----------------|-------------|
| <code>\O</code> | Octal digit |
|-----------------|-------------|

# Cuantificadores

| Quantifiers |           |       |           |
|-------------|-----------|-------|-----------|
| *           | 0 or more | {3}   | Exactly 3 |
| +           | 1 or more | {3,}  | 3 or more |
| ?           | 0 or 1    | {3,5} | 3, 4 or 5 |

# Modificadores

## Pattern Modifiers

**g** Global match

**i \*** Case-insensitive

**m \*** Multiple lines

**s \*** Treat string as single line

**x \*** Allow comments and whitespace in  
pattern

**e \*** Evaluate replacement

**U \*** Ungreedy pattern

# Escapadores

## Escape Sequences

\      Escape following character

\Q      Begin literal sequence

\E      End literal sequence

"Escaping" is a way of treating characters which have a special meaning in regular expressions literally, rather than as special characters.

# Posicionadores

| POSIX                  |                                |
|------------------------|--------------------------------|
| <code>[upper:]</code>  | Upper case letters             |
| <code>[lower:]</code>  | Lower case letters             |
| <code>[alpha:]</code>  | All letters                    |
| <code>[alnum:]</code>  | Digits and letters             |
| <code>[digit:]</code>  | Digits                         |
| <code>[xdigit:]</code> | Hexadecimal digits             |
| <code>[punct:]</code>  | Punctuation                    |
| <code>[blank:]</code>  | Space and tab                  |
| <code>[space:]</code>  | Blank characters               |
| <code>[cntrl:]</code>  | Control characters             |
| <code>[graph:]</code>  | Printed characters             |
| <code>[print:]</code>  | Printed characters and spaces  |
| <code>[word:]</code>   | Digits, letters and underscore |

# Metacaracteres delimitadores

## Common Metacharacters

|   |   |   |    |
|---|---|---|----|
| ^ | [ | . | \$ |
| { | * | ( | \  |
| + | ) |   | ?  |
| < | > |   |    |

The escape character is usually \

# Caracteres Especiales.

## Special Characters

|                   |                     |
|-------------------|---------------------|
| <code>\n</code>   | New line            |
| <code>\r</code>   | Carriage return     |
| <code>\t</code>   | Tab                 |
| <code>\v</code>   | Vertical tab        |
| <code>\f</code>   | Form feed           |
| <code>\xxx</code> | Octal character xxx |
| <code>\xhh</code> | Hex character hh    |
